

Ava Melhem. .12.11.2019.

Have you ever seen a meal worm? If you haven't, they are a type of worm.

The needs of a meal worm are food, a container with oats, water and air.

Meal worms start in an egg and end as a beetle.

I have mealworms at my school. One is shedding its skin and one is a pupa. I really like mealworms because they turn into beetles and I like beetles. So that's the meal worm story.

now!
